

Open Mirada by double-clicking, or by clicking on the pop-up button

For a video file, you can make a series of sketches on different frames within one comment. Start sketching on the desired frame, then move to another frame for the next sketch, and so on. Then click *Publish*. *Onion skin* mode makes the creation of animated comments even more convenient

In the player window on the right, click on *New comment* and write your text. You can place a label with a comment number next to it. Then post your comment

To create a video comment, select *Start video comment* in the *New comment* window on the right. Such comments record your voice, image navigation, mouse movements, sketches and playing/frame-by-frame in case of commenting on a video file. You can listen to it and then click *Publish*.

Use the panel above to add any number of sketches. Then click *Publish*. You can also publish your text comment together with sketches. If you have a video file, you can stretch the sketch over several frames through the timeline. When playing, the sketch will be displayed according to the specified duration
