

Select the required task and right-click or click on the panel to run Task external chats command

Connect your Cerebro profile to your Discord account and click Authorize

Note: you need to connect once, after that you can add tasks directly from Discord

You can start working after you get the notification that the task has been added

Select Discord messenger. We will generate a link to connect the bot to your server

In a private chat with the Cerebro bot in Discord, link your accounts. Use the /login command and specify the mailbox that is attached to the account in Cerebro

Follow the link and select the server where you want to add the bot
